

Primus-HD® / Primus-HD® Yellow

1 step preload in perfection

**NEW
VERSION**

Primus-HD®

Clear IOL, aspherical

**Primus-HD®
Yellow**

IOL with blue light filter, aspherical

Hydrophobic

No glistening

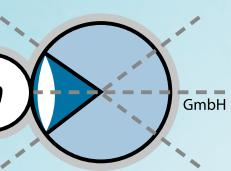

Simple handling

Fast unfolding

Products for ophthalmic surgery

Prosert® Preload Injector

The self-developed Prosert® Preload Injector will win you over with its easy handling.

After filling with the viscoelastic material, the injector is ready for use.

*Optimal lens fit,
100% preloaded*

*Dynamic tip allows implantations
with 2.0 – 2.2 mm incisions*

*Outer diameter of the
injector tip: 1.78 mm*

Primus-HD® (clear)

The benefits at a glance:

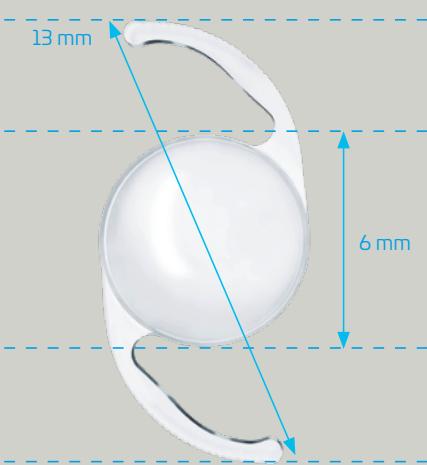

- Aspherical optics (aberration correcting -0.20 µ)
- Optics with posterior-convex design
- Hydrophobic acrylate – glistening-free
- 360° continuous, sharp edge
- Haptics angled at 1.5°
- Modified C-loop
- UV filter
- Refractive index 1.48 at 35°
- 13 mm total diameter
- 6 mm optic diameter
- Dptr. -10.0 to + 36.0 in 0.5 steps – all dptr. preloaded

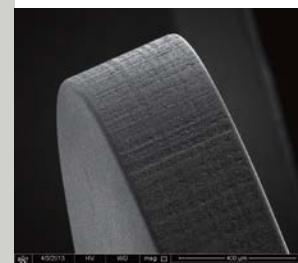

Primus-HD® Yellow (yellow)

The benefits at a glance:

- Aspherical optics (aberration correcting -0.20 µ)
- Optics with posterior-convex design
- Hydrophobic acrylate – glistening-free
- 360° continuous, sharp edge
- Haptics angled at 1.5°
- Modified C-loop
- UV filter and integrated blue light filter
(cut from 390 nm – 470 nm)
- Refractive index 1.48 at 35°
- 13 mm total diameter
- 6 mm optic diameter
- Dptr. -10.0 to + 36.0 in 0.5 steps – all dptr. preloaded

Ultra-pure premium acrylic, glistening-free, no sticking of the haptics, high light transmission.

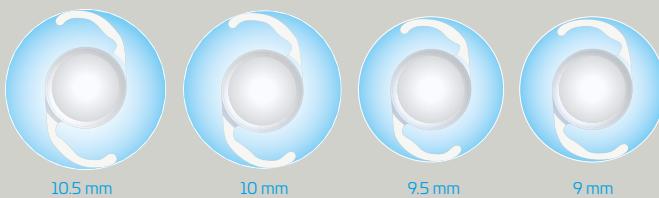

Roughened lens edge, effectively prevents glare induced by the lens edge.

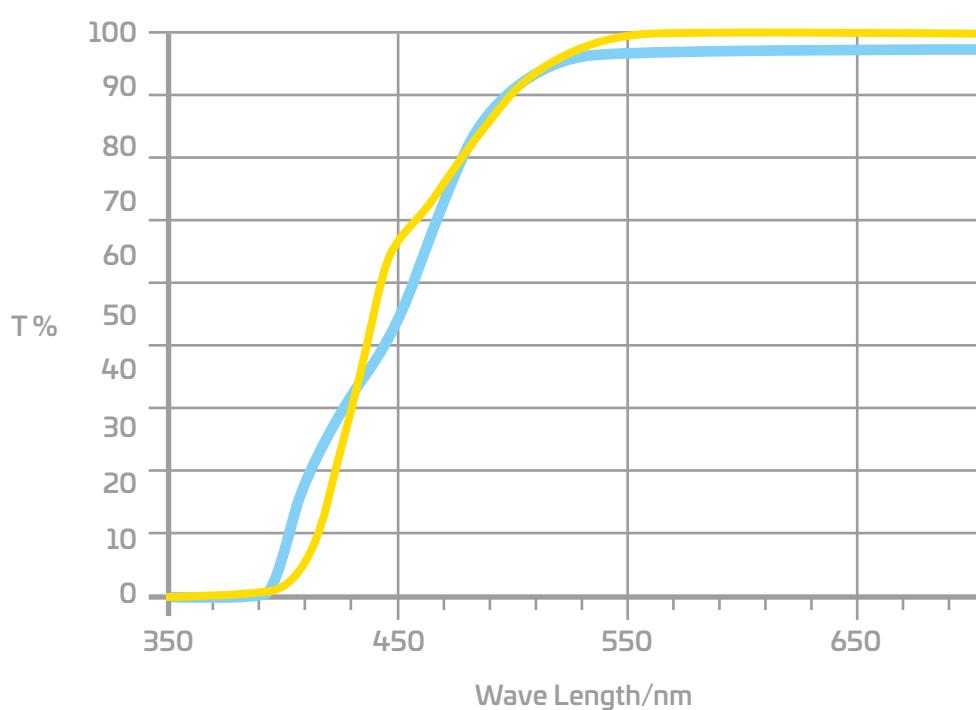

360° contact with the posterior capsule.

Modified C-loop

- Ensures lens adjustment to capsular bags of different sizes
- Ensures excellent centring and stability

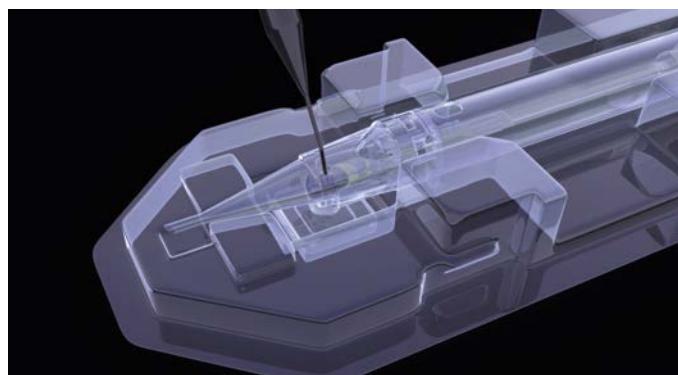

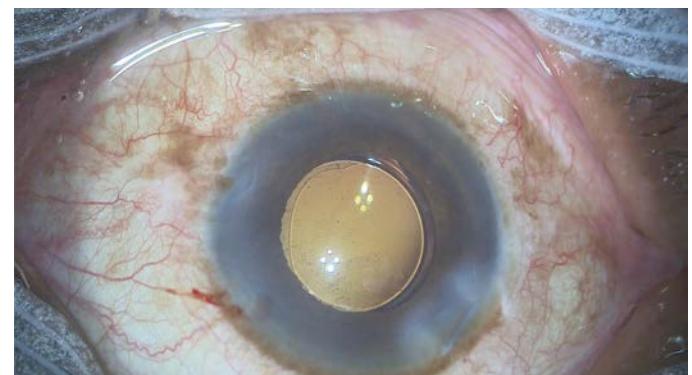

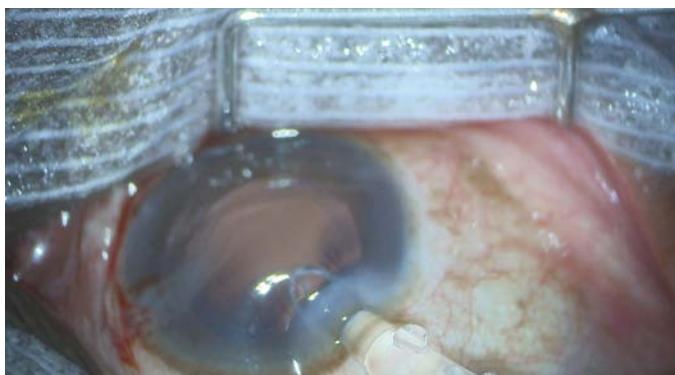

360° ultra-sharp square edge design, increased barrier effect against LECs.

Primus-HD® Yellow
Competitors

Implantation of the Primus-HD® via an incision size of 2.0 mm „into the bag“

The following description is merely a summary of the handling and does not replace the instructions for use.

Step 1: Wetting

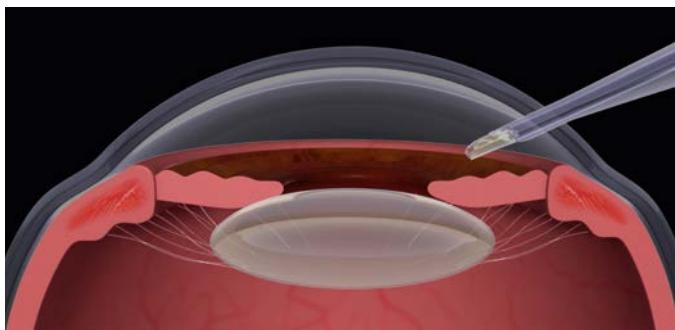

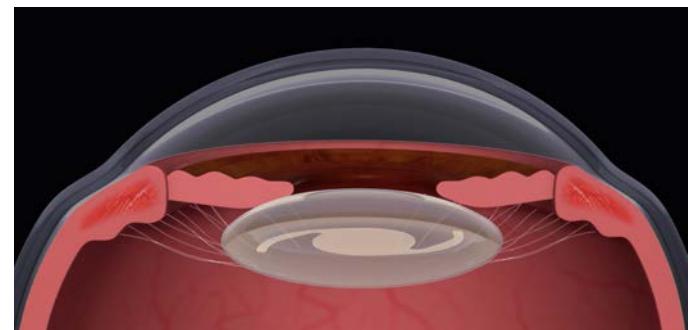

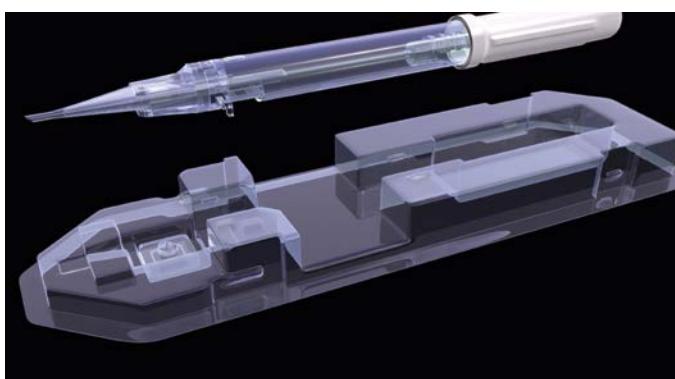

At the beginning of the aspiration phase, fill in the viscoelastic material through the infusion opening to allow sufficient wetting. The injector remains in the holding container.

Step 2: Implantation preparation

Remove the injector from the container when the surgeon is ready for the implantation.

Step 3: Implantation

Slowly push the IOL in the direction of the injector tip by turning the screw handle clockwise until the front haptic has reached the bevel. Insert the injector tip with slot down (Bevel Down) through the incision deep into the capsular bag and release the lens by smoothly turning the screw handle further into the capsular bag.

Technical data Primus-HD®/ Primus-HD® Yellow

Model	Primus-HD®/ Primus-HD® Yellow
IOL type	Single piece
Material	High-purity, hydrophobic acrylic, glistening-free, grade „O“ on the Miyata scale
Filter	UV-filter (Primus-HD® Yellow with blue light filter)
Lens type	Posterior convex, aspherical optics (aberration correcting -0.20 µ)
Powers	-10.0 to +36.0 in 0.5 D increments, all strengths preloaded
A constant*	118.2 (nominal)
Lens diameter	6.0 mm optic zone
Total diameter	13.00 mm
Haptic design and angularity	Modified C-loop, 1.5°
Edge design	360° ultra-sharp square edge, roughened edge

Optimized values for laser biometrics

Nominal	118.2
Haigis	$a_0=1.46 \ a_1=0.40 \ a_2=0.10$
HofferQ	pACD 5.68
Holladay	$s_f=1.91$
SRK/T	119.2
SRKII	119.6

*The A constant is the basis for calculating the lens power.

It is recommended that these be customized based on the experience of the operating surgeon and the equipment used.
